MUHAMMAD AMIR AFHAM BIN SHAHRIZUAN

Information Systems Engineer graduate combining backend development skills with strong Quality Assurance expertise. Experienced in building secure REST APIs and automated data pipelines at Bank Islam, alongside QA leadership in the MSTB Test Design Competition. Adept at solving complex problems and delivering reliable software using .NET and Laravel.

EDUCATION

Universiti Teknologi MARA (UiTM), Shah Alam — Selangor,MY

Bachelor of Information Systems (Hons.), Information Systems Engineering — Mar 2024 – Sep 2026

CGPA: 3.53 | First Class Honours

Universiti Teknologi MARA (UiTM), Segamat — Johor,MY

Diploma in Computer Science — Oct 2021 – Feb 2024

CGPA: 3.85

Vice Chancellor's Award Recipient (Dean's List, All Semesters)

EXPERIENCE

Bank Islam Malaysia Berhad — Backend Software Engineer (Intern) — Mar 2026 – Sept 2026

- Improved teamwork efficiency by increasing feature deliverables every week
- Resolved a Jira-flagged security defect where deactivated users retained full website and API access
- Implemented account-status validation across endpoints and enforced session/refresh-token revocation to force immediate re-authentication on deactivation.
- Built the automated daily General Ledger pipeline for Bureau de Change using Quartz job aggregates branch transaction data on closing, queues the file for SFTP delivery, and auto-retries until a monitoring service confirms receipt with failures logged for traceability.
- Document Management System: audited inconsistent controller-level logging and implemented standardized audit-trail tracking across API endpoints; built an open-text feedback module for end users.
- Modeled relational database schemas from gathered requirements using ERDs
- Tested and documented endpoints via Swagger
- Followed GitLab feature/bugfix/hotfix branching with regular code reviews after each module
- Contributed in weekly Agile stand-ups.
- Applied encryption to secure data transfer between internal web applications and wrote stored procedures to optimize query operations.

HSC Global Ventures — Field Service Engineer (Intern) — Oct 2022 – Mar 2024

- Delivered on-site technical deployment across multiple client locations
- Assist and guide users during the peripherals and device installations.
- Designed a ticketing system website prototype to streamline IT helpdesk operations, track user incidents, and improve overall response times.
- Conduct hands-on new laptop software installations
- Executed seamless data migrations for hardware refreshes, utilizing Microsoft OneDrive to securely back up and transfer user profiles to new workstations.

PROJECTS

- Qurban Management System (Laravel, MySQL) : Booking, registration, and payment tracking platform; authored full SRS/SDD/STD/STR documentation.
- Workforce Management System (Laravel, MySQL) : Rule-based inference engine assigning facilitators to events by skill and rules.
- Urisense (Arduino, C++, Firebase, Python) : ESP32 IoT device using color and ultrasonic sensors to measure urine volume/color and estimate hydration, displayed on a live web dashboard.

TECHNICAL SKILLS

Languages: C#, Java, PHP, C++, JavaScript, SQL
Databases: MySQL, MongoDB, Oracle, Firebase
Frameworks: .NET (MVC, Swagger), Laravel(MVC), REST API, OOP
Tools: Visual Studio Code, NetBeans, XAMPP, Git, GitLab, Jira, Figma, Draw.io, Power BI, MySQL Workbench

CERTIFICATIONS & TRAINING

- ISTB Certified Tester Foundation Level (CTFL) Certified
- AWS Kiro Workshop
- Foundational C# with Microsoft
- Introduction To Internet Of Things (IoT) And Digital Transformation Certificate
- IBM Introduction To Software Engineering
- Google AI Fundamentals

ACHIEVEMENTS

- Anugerah Naib Canselor (Vice-Chancellor's Award), Diploma in Computer Science
- Knowledge-transfer contributor, SULAM UiTM (Kampung Budiman)
- Competed in Test Design Competition 2026

TECHNICAL COMPETITION

Test Design Competition - Malaysian Software Testing Board

- Test Lead for the team in the MSTB Test Design Competition to establish a comprehensive QA strategy for a cloud-hosted Shopify e-commerce platform lacking formal documentation.
- Designed a Master Test Plan and Test Design Specification (TDS) utilizing Risk-Based Testing to prioritize core transactional modules and mitigate business continuity risks.
- Performed functional manual testing to verify e-commerce functionalities against identified business rules, validate expected results, and identify potential defects through systematic test execution.
- Applied Requirements Engineering (CPRE) principles to reverse-engineer business rules and construct a Test Basis from system observation, domain knowledge, and exploratory analysis.
